1 INTRODUCTION

This document provides a description, supported by pictures, of the WARIFA project website's overall structure. The website was released at M6, as planned in the Description of Action (DoA).

As stated in D8.1 Plan for the Dissemination and Exploitation of Results, the project website has been conceived as the main tool for dissemination and communication strategy implementation.

The project website will enable effective communication with external stakeholders, the press and the wider EU public. It provides information on the project, the consortium, the project results and updates, list of the scientific publications, subscription to the project newsletter and much more.

The WARIFA website is available at the URL: <http://warifa.eu/> and has been developed by WP8 leader CIAOTECH, in collaboration with the project coordinator and the partners of the consortium.

2 WARIFA PROJECT STRUCTURE

The WARIFA website is available at the URL: <http://warifa.eu/>. An overview of the main sections of the website is given below and shown in Figure 1:

- HOME PAGE
- THE PROJECT – WARIFA; Work Packages; Milestones, Deliverable and Publications, Media Kit
- PARTNERS
- NEWS & EVENTS – News/Events; Media; Newsletter; Press Release
- D&C TOOL (private area for partners)
- CONTACT

Figure 1 WARIFA's web section

2.1 HOME PAGE

The Home Page clearly communicates the website's purposes and shows all major contents available. It provides a short description of the project and the direct links to the different available pages (The Project – Partners – News and Events – Contact) and direct links to the project Social Media channels (Twitter and LinkedIn).

The figure below shows the Home Page of WARIFA website (Figure 2).

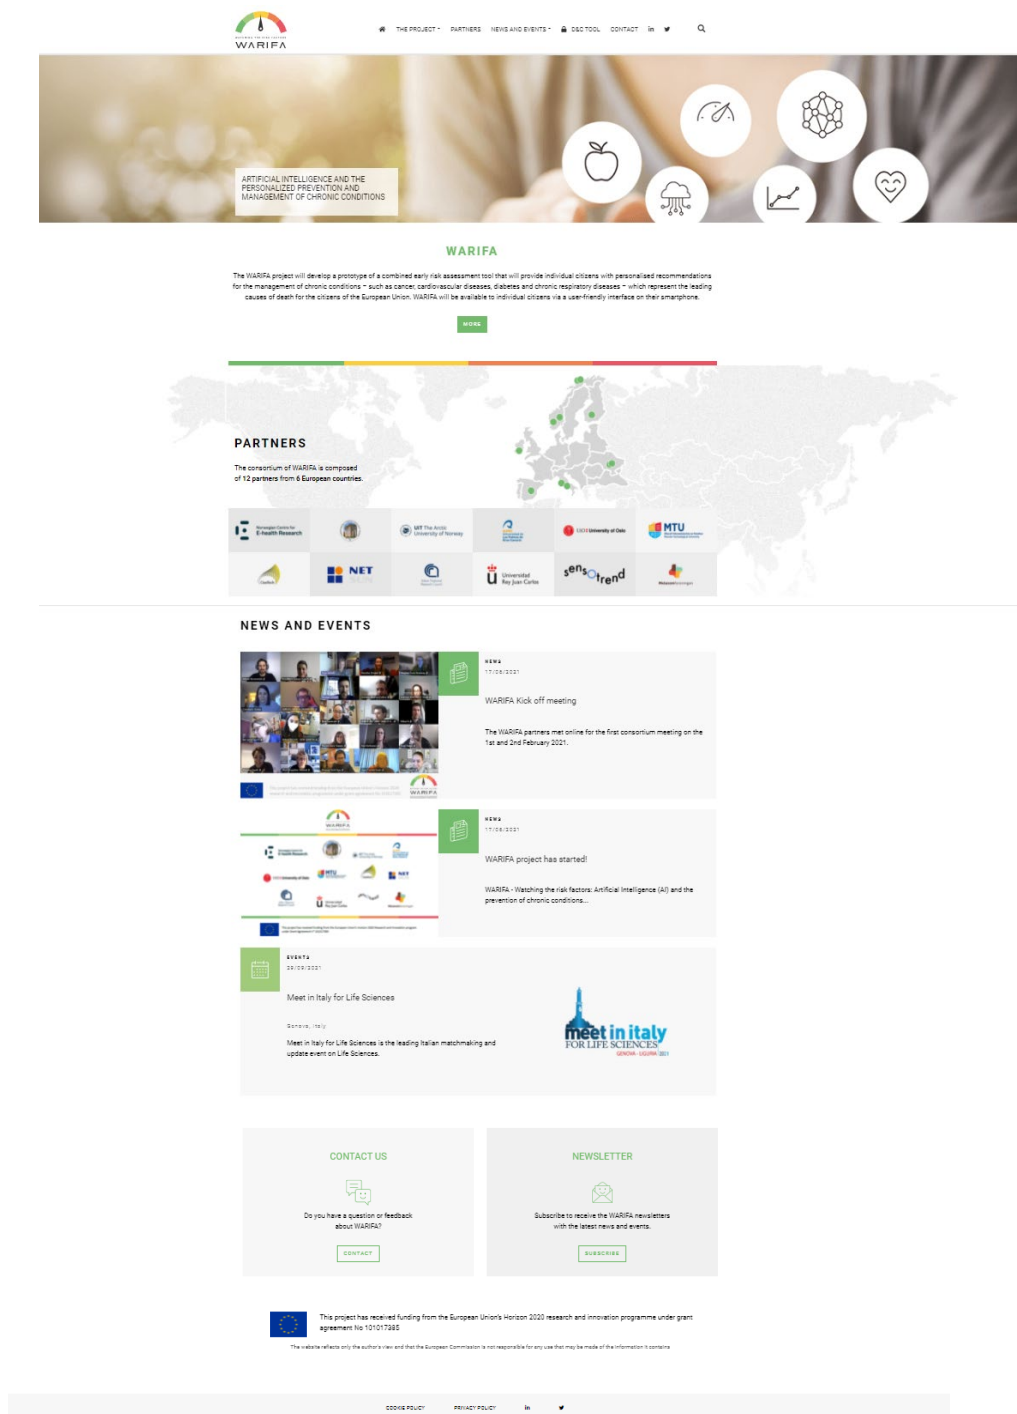

Figure 2 Home Page

All logos from partners are shown at the center of the Home Page, together with a map showing their geographic position and the European Countries involved in WARIFA. This is an easy way to locate who is involved in the development of the project.

Furthermore, at the bottom of the homepage two boxes (Figure 3) have been added to call to action the web user. The first one is to get in touch with the project consortium with a direct link to the “CONTACT” page. The second one is for subscription to the newsletter. These two boxes are visible in all pages of the website.

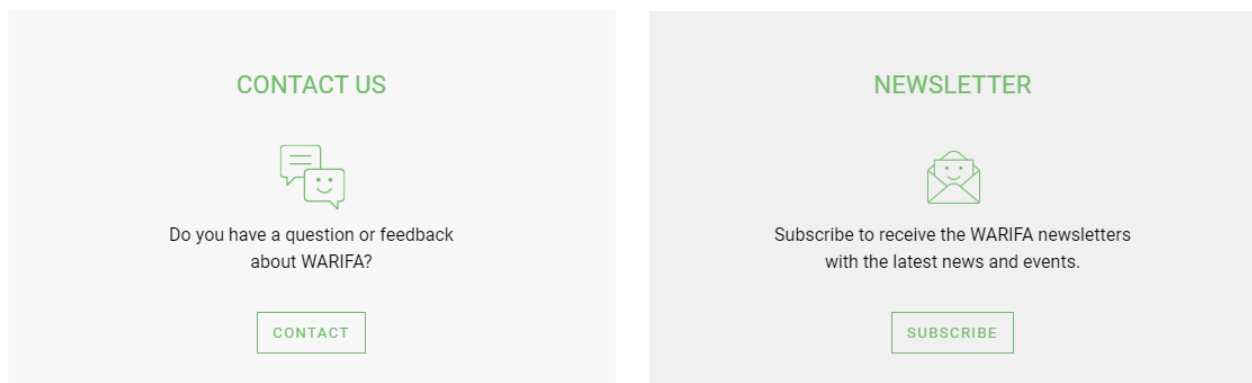

Figure 3 Call to action boxes

Finally, according to the EC dissemination rules, in the footer the flag of EU and the text stating the funding of the project as Horizon 2020 project appears, together with the disclaimer excluding the Agency’s responsibility (Figure 4).

Figure 4 Footer

2.2 SECTION “THE PROJECT”

This section includes:

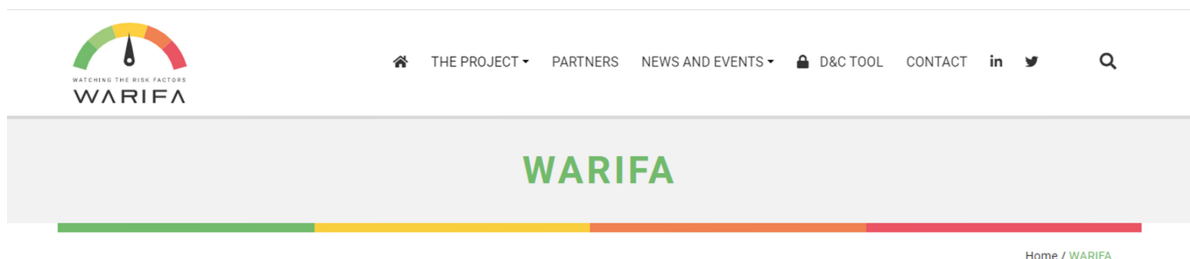

- A brief description of the WARIFA project and of its main objectives, the focus areas on which it focuses on and the impact it will generate at individual level and at Health care system level
- WORK PACKAGES: the section illustrates the main objectives of the eight WPs included in WARIFA project activity work plan. Furthermore, the lead partner of each WP is shown by means of its logo.

- **MILESTONES:** the page shows the six milestones that the consortium will reach during the project lifetime. They are listed in a graphic timeline.
- **DELIVERABLES & PUBLICATIONS:** in this page, the consortium will list all the public deliverables produced during the project lifetime, as well as the scientific publications to be published by the partners.
- **MEDIA KIT:** in this webpage, the dissemination material (i.e., brochure, poster, and roll-up) is made available for consultation and download.

Figure 5-9 illustrate the specific above-mentioned pages.

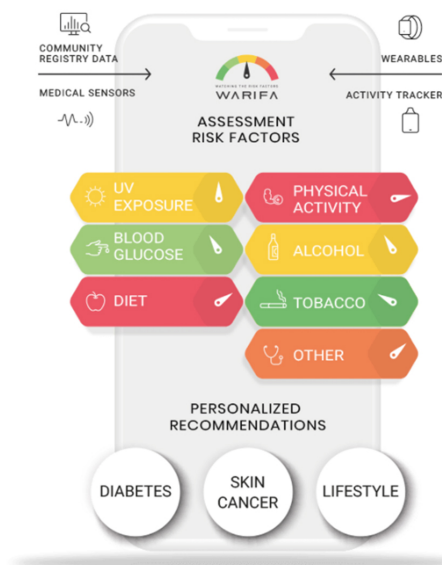

The WARIFA project will develop a prototype of a combined early risk assessment tool that will provide individual citizens with personalised recommendations for the management of chronic conditions – such as cancer, cardiovascular diseases, diabetes and chronic respiratory diseases – which represent the leading causes of death for the citizens of the European Union.

WARIFA will be available to individual citizens via a user-friendly interface on their smartphone.

WARIFA uses artificial intelligence (AI) and the analysis of user-generated and big data to provide a personalized set of recommendations on lifestyle factors according to the risk score of each individual. Citizens are motivated to change unhealthy habits while supporting good lifestyle choices.

WARIFA will inform citizens about the improvements on the management of a known chronic condition while, simultaneously, raising awareness on the risk of developing another condition. The individuals with a high-risk score will be advised to contact the health care system.

FOCUS AREA

WARIFA has its main focus on the prevention of melanoma skin cancer, complications of diabetes and lifestyle risk factors for chronic conditions. This is achieved by providing citizens with personalized recommendations that help to improve lifestyle risk factors such as excessive sun exposure, unhealthy diet, harmful alcohol and tobacco use, and physical inactivity. WARIFA will contribute to health promotion and disease prevention actions which will help relieve the burden on health care systems and economies.

IMPACT

AI-based combined early risk assessment can empower citizens to adopt healthier habits and a better lifestyle by providing personalised recommendations on how to change their risk behaviour. The benefits of early risk assessment, prevention and intervention will be evident at:

- Individual level**
 Citizens will be supported in improving by at least 20% each risk factor by increasing the level of physical activity; reducing sun exposure; or reducing the number of hypoglycaemic events.
- Health care system level**
 WARIFA will contribute to the early diagnosis of chronic conditions by promoting early identification of risks. WARIFA will provide clinicians with an overview of high-risk behaviours enabling a more rapid assessment and monitoring of the patient, thus, making counselling more personalized and efficient. WARIFA will improve efficiency and resource utilization by reducing the number of consultations for risk assessment. WARIFA is AI-based which allows for scalability, making the system ready to be used with other chronic conditions to which changes in behaviour can contribute to better health.

2.3 PARTNERS

The section “PARTNERS” hosts information about each partner in the WARIFA consortium. For each partner organization, a brief description is provided, including the logo, the full name, the country and a link to the official website of the organization (Figure 10).

Partners

[Home](#) / [Partners](#)

The consortium of WARIFA is composed of 12 partners from 6 European countries.

COORDINATOR

The Norwegian Centre for E-health Research (NSE), Project Coordinator.

The Norwegian Centre for E-health Research (NSE) is legally a part of the University Hospital of North Norway HF and will be the responsible party for the project.

<https://ehealthresearch.no/en/> [Norway](#)

University of Medicine and Pharmacy "Carol Davila" Bucharest (UMFCD)

University of Medicine and Pharmacy "Carol Davila" Bucharest (UMFCD) is the largest medical university in Romania. and has a wide network of university hospitals in Bucharest, covering all clinical specialities It includes preclinical departments equipped for the various aspects of fundamental and translational research in human medicine. It collaborates for melanoma patients care with a wide network of physicians and medical centres nationwide, serving as national reference centre.

<https://umfcd.ro/en/> [Romania](#)

Arctic University of Norway (UiT)

The Arctic University of Norway (UiT) is the third largest in Norway and the northernmost university of the world.

The Health informatics and -technology (HIT) group (former: Medical Informatics & Telemedicine (MI&T) group) was established 1994-95. From the beginning, the group has been responsible for teaching Medical Informatics / Health Informatics courses at the Department of Computer Science. Our research approach is experimental with a focus on health technology (artefacts). The group has a long tradition working with clinicians at the University Hospital of North Norway (UNN), as well as various research groups in Europe and USA.

<https://en.uit.no/startside> [Norway](#)

University of Las Palmas de Gran Canaria (ULPGC)

University of Las Palmas de Gran Canaria (ULPGC) is a modern institution with a long academic record of accomplishment located in Gran Canaria, Canary Islands. In this project, two research institutes are involved: the Research Institute for Applied Microelectronics (IUMA) and the Research Institute for Biomedical and Health Sciences (IUIBS).

<https://www.english.ulpgc.es/> [Spain](#)

University of Oslo (UiO)

Oslo Centre for Biostatistics and Epidemiology (OCBE) is a joint centre integrating the activities of the Department of Biostatistics, UiO, and the Section of Biostatistics, Epidemiology and Health Economics, Oslo University Hospital. OCBE develops statistical methods and their application to the design, analysis and interpretation of biomedical, clinical and epidemiological studies and data.

<https://www.uio.no/english/> [Norway](#)

Munster Technological University (MTU)

Munster Technological University (MTU) – former known as the Cork Institute of Technology (CIT) – is a leading third level educational institute in Ireland with over 17,000 students across the Faculties of Science & Engineering and Business & Humanities.

<https://www.mtu.ie/> [Ireland](#)

CiaoTech Srl, (CIAOTECH)

CiaoTech Srl, (CIAOTECH) the Italian branch of PNO Group, represents Europe's largest independent public funding and innovation consultancy with 30 years of hands-on expertise with more than 500 funding programmes in most EU countries, annually raising approximately 1 Billion Euro for its clients.

Figure 10 Partners

2.4 NEWS AND EVENTS

This section contains an archive of news related to WARIFA, and will provide information on the participation in international and national events joined and/or organised in the framework of the project (Figure 11).

A preview of the more recent news is shown also in the Home Page.

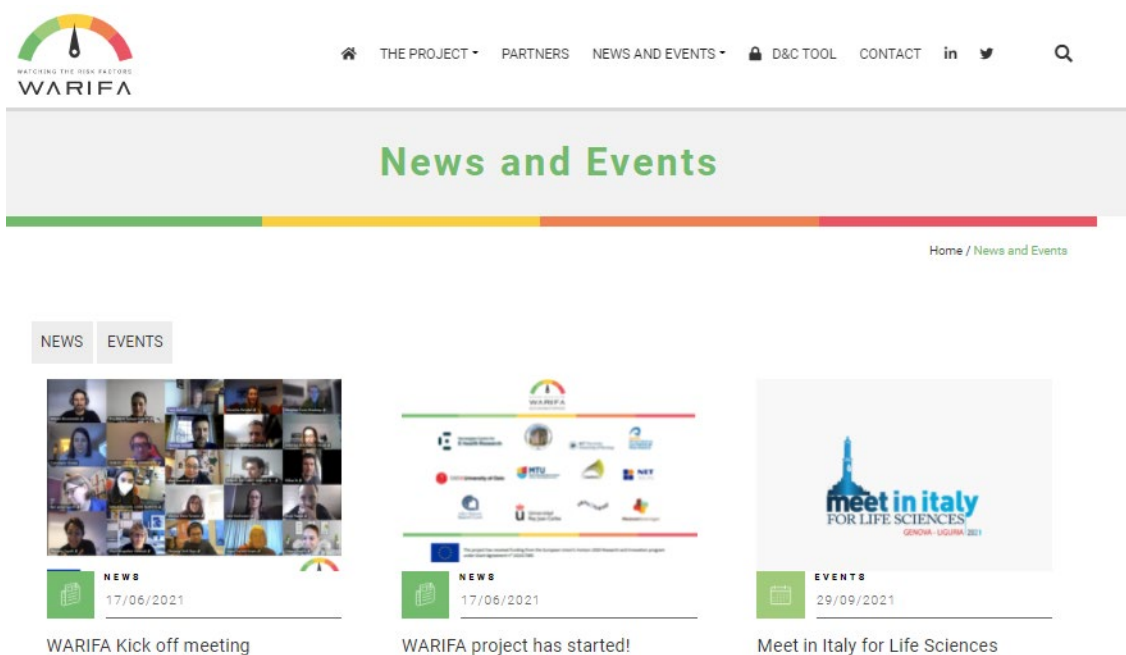

Figure 11 News and Events

2.5 DISSEMINATION & COMMUNICATION TOOL

The WARIFA Dissemination Questionnaire is a tool aimed at supporting the Dissemination and Communication (D&C) teams and their activities within the project. The D&C tool facilitates the collection of data related to D&C activities from each project partner, enabling better tracking and reporting of such activities to the EC. The D&C section is private and only accessible to project partners.

CIAOTECH, the WP8 leader, will provide access to the person in each partner organization responsible for including the information needed in the website. The partners will be asked to complete a simple questionnaire for each D&C action performed. The questionnaire collects the main data related to an activity, such as date, place, aim, location, target audience etc.

The collection and the storage of data will be done in line with the General Data Protection Regulation (UE 2016/679). Each semester, CIAOTECH will perform a check of the D&C actions implemented by the consortium in order to continuously monitor the impact of the communication and dissemination strategy implementation.

Figure 12 D&C Tool

2.6 CONTACT

The “CONTACT” section (Figure 13) includes a standard web-based form where interested parties can get in touch with the WARIFA project. The “Contact” section also includes the name and contact details of the Project Coordinator, represented by the Project Leader, Conceição Granja Bartnæs.

Figure 13 Contact

3 CONCLUSIONS

The WARIFA website is one of the main dissemination and communication tools for the WARIFA project and its results. It will be continuously updated with news related to project activities, project progress and project results.
